

DOCK COLD WEATHER CHECKLIST

Catch winter weak points before they cause downtime.

RIEKES
EQUIPMENT

FACILITY:

DOCK #:

DATE:

	CHECKPOINT	NOTES
	DOCK SEALS & SHELTERS Check for tears, compression, or gaps where the trailer meets the seal.	
	BUMPERS Look for cracking or crumbling that lets cold air and moisture behind the seal.	
	DRAFT WEDGES & DOOR STRIPS Confirm the gap between the overhead door, leveler, and pit wall is fully closed.	
	DOCK LEVELERS Cycle each leveler and listen for strain — cold weather is hard on hydraulics and worn seals.	
	VEHICLE RESTRAINTS Test that every restraint engages and releases reliably.	
	LIGHTING & GUIDE LIGHTS Confirm dock approach lighting is working before daylight hours shrink.	
	SAFETY BARRIER GATES Check for damage before ice and snow make foot traffic riskier.	

If anything on your checklist needs attention, now is the time to act — before winter sets in.
